

DAVIS COUNTY

INFLUENZA REPORT

2019-20 Influenza Season Week 7 — Week Ending 02/15/2020

LOCAL SUMMARY

ILI activity level:
HIGH

Weekly hospitalizations:
20

Weekly ILI rate:
4.9%

Influenza-like Illness (ILI) is defined as fever (temperature of $\geq 100^{\circ} F$ [$37.8^{\circ} C$]), cough, and/or a sore throat without a known cause other than influenza.

INFLUENZA ACTIVITY IN DAVIS COUNTY

Influenza activity in Davis County remains at a *high* level. The school absentee rate dropped notably, below what has been seen in past years (see Figure 1). There were 20 hospitalized influenza cases that occurred in Davis County during Week 7, bringing the season total to 91. The number of hospitalized cases increased, while the influenza-like illness (ILI) rate decreased in Week 7 (see Figure 2).

INFLUENZA ACTIVITY IN UTAH*

Utah's influenza severity estimate remained at a *moderate* level during Week 7. There were 94 hospitalized influenza cases reported during Week 7 in the state of Utah, with a total of 875 cases so far this season.

Surveillance data for influenza testing in laboratories across Utah indicate that 1,115 specimens were positive for influenza during Week 7. The predominant circulating virus this week is Influenza A. Influenza B also continues to circulate.

Table 1. Influenza Positive Specimens Tested by Utah Laboratories, 2019-20

Positive Specimens by Type/Subtype	Current Week		Season-to-Date	
	Number	%	Number	%
Influenza A (2009 H1N1)	40	3.6%	485	4.7%
Influenza A (H3)	2	0.2%	34	0.3%
Influenza A (no subtype)	650	58.3%	4,082	39.3%
Influenza B	423	37.9%	5,795	55.7%
Total	1,115		10,399	

INFLUENZA ACTIVITY IN THE UNITED STATES**

The number of hospitalizations are similar to what has been seen in past seasons, however rates in children and young adults are higher than at this time in recent seasons. During Week 6, two states reported *regional* activity, and 48 states (including Utah) reported *widespread* activity (see Figure 3).

Collaborating clinical laboratories across the United States reported that 30.8% of respiratory specimens tested were positive for influenza in Week 6. Of those, 59.4% were typed as influenza A and 40.6% as influenza B.

CDC antigenically characterizes virus samples to evaluate vaccine efficacy. Currently, 74.2% of influenza A and 64.3% of influenza B samples are similar to this season's vaccine. CDC also tests for resistance to four antiviral medications (oseltamivir, peramivir, zanamivir, and baloxavir); 99.7% of samples tested show no resistance. Antiviral treatment is recommended as early as possible for patients with severe illness or who require hospitalization.

VACCINE INFORMATION

CDC recommends that all persons older than 6 months of age receive an influenza vaccine by the end of October.

Flu shots are available at Davis County Health Department at no out-of-pocket cost for those *with* contracted health insurance.

For those *without* insurance:

- Adults (19+ years) can receive the flu shot for \$30.
- Seniors (65+ years) can receive high-dose Fluzone® for \$45.
- Children and adolescents (<19 years) may receive the vaccine for an \$8 fee.

For additional information, call the Immunizations Hotline at (801) 525-5020.
